

post - @ Lampfield

If handling incoming phone calls is a time consuming problem for your operators, then the Post-@ Presence Lampfield is the solution.

Why post - @ Lampfield?

With people working across several offices, floors, at home and remotely, finding them and putting through incoming phone calls is a problem. All too often, calls are being put through to someone who is not at his desk or who is not even in. A lot of time is lost in finding the right people for customers.

Concepts relying on employees to logon to a phone or to indicate their own status are not reliable. People tend to leave their desk for a minute, or simply don't change their status.

The automatic Post-@ Presence Lampfield system solves this problem. The operator has a simple and complete overview of employees: who is in, who is out, where they are, are they busy or available on their PC or on the phone. The operator may send an IM text message or SMS with just one click.

■ Fully Automatic

Employees needn't do anything.
No logging onto phone or PC. No status changes are required.

■ Easy Integration

Post-@ Lampfield is an independent system with an optional interface to Active Directory and PBX or VoIP exchange.

Supports:

**Saves Time,
Improves Customer
Satisfaction,
Internal Communication
and Efficiency**

- Who is in ?
- Where ?
- Who are available ?

- Local Offices
- Remote Offices
- Home Workers
